                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein search, using sw model

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or decreases ABCG5 activity respectively. The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal to a mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal tomprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present amino acid sequence is encoded by the human ABCG5 gene located on chromosome 2p21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                         The invention relates to an isolated Sitosterolaemia Susceptibility Gene (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) CC binding cassette (ABC) family cholesterol transporter. SSG is useful CC for identifying a compound useful in the treatment or prevention of a CC sterol-related disorder, including sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or CC nutritional deficiencies. SSG is also useful for treating cholesterol-associated diseases or conditions including coronary heart disease and CC cher cardiovascular diseases, and sitosterolaemia-associated condition CC including arthritis, xanthomas and chronic haemolytic anaemia. SSG CC expression cassette is useful in the production of transgenic non-human CC animals. SSG genes and their homologues are useful as tools for a number CC ardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is human SSG protein. Human SSG is located on chromosome
                                                                                                                                                                                                                                                                                                                                                                Novel sitosterolemia susceptibility gene polypeptide and polynucleotide, useful for screening a compound that increases level of expression or activity of SSG polypeptide for treating sterol-related disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; sitosterolaemia susceptibility gene; SSG; atherosclerosis; sterol-related disorder; hyperlipidaemia; hypercholesterolaemia; thera gall stone; coronary heart disease; cardiovascular disease; arthritis; xanthoma; haemolytic anaemia; transgenic animal; chromosome 2p21.
                                                                                                                                                                                                                                                                                                                                 Claim 19; Fig 8; 105pp; English.

                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABGC5) polypeptide. The invention is useful for identifying a creatisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and cc measuring ABCG5 biological activity in the cell culture or in mammal, cwhere an increase or decrease in ABCG5 biological activity compared to CC ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or certain comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mutation of the compound that increases or CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC Polypeptide in a cell culture or mammal is also compared with that of a csecond cell culture or mammal is useful for treating or preventing construction of ABCG5 activity is useful for treating or preventing construction and/or decreasing cholesterol acid sequence represents the human ABCG5 mutant E146Q protein of the coveration.

            The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cel culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or
                                                                                                                                                                                                                                                                                                               Novel mammalian ATP-binding cassette gene 5 polypeptide, a nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present amino acid sequence represents the human ABCG5 mutant R419H protein of the

                                                               Š
                                                                                                                                                                                    The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to CC ABCG5 biological activity in a control cell culture or mammal not CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal CC ABCG5 biological activity, or level of ABCG5 mutation of the comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mutation of ABCG5 activity is useful for treating or preventing CC disease. The method of the invention is useful for Increasing cholesterol activen and/or decreasing cholesterol adsorption. The present amino CC acid sequence represents the human ABCG5 mutant R389H protein of the
                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mRNA, or level of the CC polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a GC contilation of ABCG5 activity is useful for treating or preventing CC hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's CC disease. The method of the invention is useful for increasing cholesterol acid securence represents the human ABCG5 mutant Rd19p protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

 The invention relates to an isolated Sitosterolaemia Susceptibility Gene (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) CC binding cassette (ABC) family cholesterol transporter. SSG is useful CC for identifying a compound useful in the treatment or prevention of a CC sterol-related disorder, including sitosterolaemia, hyperlipidaemia, CC hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or CC nutritional deficiencies. SSG is also useful for treating cholesterol-CC associated diseases or conditions including coronary heart disease and CC other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG expression cassette is useful in the production of transgenic non-human CC animals. SSG genes and their homologues are useful as tools for a number CC of applications including diagnosing sitosterolaemia and other CC cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The CC cardiovascular disorders, for forensics and paternity determinations, the control of treating any of a large number of SSG associated diseases. The CC cardiovascular disorders, for forensics and paternity determinations, and control of treating any of a large number of SSG associated diseases. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) CC binding cassette (ABC) family cholesterol transporter. SSG is useful CC for identifying a compound useful in the treatment or prevention of a CC sterol-related disorder, including sitosterolaemia, hyperlipidaemia, CC hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or cuntritional deficiencies. SSG is also useful for treating cholesterolaemia, contact diseases or conditions including coronary heart disease and corner cardiovascular diseases, and sitosterolaemia-associated condition concluding arthritis, xanthomas and chronic haemolytic anaemia. SSG cappression cassette is useful in the production of transgenic non-human confidence is sectulated in the production of transgenic non-human confidence is mouse sitosterolaemia and other cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The correspondence is mouse SSG protein. Mouse SSG is located on

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
                                     The invention relates to an isolated Sitosterolaemia Susceptibility Gene (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) binding cassette (ABC) family cholesterol transporter. SSG is useful for identifying a compound useful in the treatment or prevention of a sterol-related disorder, including sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or nutritional deficiencies. SSG is also useful for treating cholesterolaesociated diseases or conditions including coronary heart disease and associated diseases or conditions including coronary heart disease and
   other cardiovascular diseases, and sitosterolaemia-associated of including arthritis, xanthomas and chronic haemolytic anaemia. expression cassette is useful in the production of transgenic respectively.
                                                                                                                                                                            Novel sitosterolemia susceptibility gene polypeptide polynucleotide, useful for screening a compound that level of expression or activity of SSG polypeptide for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell CC ulture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal, which have ABCG5 biological activity compared to CC where an increase or decrease in ABCG5 biological activity compared to CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity, or level of ABCG5 middle or a wild type polypeptide. The CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC polypeptide in a cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a Second cell culture or mammal is useful for treating or preventing CC disease. The method of the invention is useful for increasing cholesterol acid sequence represents the mouse ABCG5 protein of the invention.

Novel mammalian ATP-binding cassette gene 5 polypeptide, and the nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases

Example 3; Page 45; 66pp; English.

CC The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, arteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying CC a compound which alters ABCG5 activity level comprising contacting a cel culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal,

The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of that of a second cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerois, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present amino

The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a CC predisposition for developing sitosterolemia, asteriosclerosis or heart CC disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell CC culture or mammal which have ABCG5 polypeptide with a compound and CC measuring ABCG5 biological activity in the cell culture or in mammal. CC where an increase or decrease in ABCG5 biological activity on a control cell culture or mammal not CC contacted with the compound, identifies a compound that increases or CC decreases ABCG5 activity respectively. The cell culture or mammal CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity, or level of ABCG5 mRNA, or level of the CC ABCG5 biological activity, or level of ABCG5 mRNA, or level of the CC ABCG5 biological activity respectively. The cell culture or mammal CC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CC ABCG5 biological activity or level of ABCG5 mRNA, or level of the CC ABCG5 biological activity is useful for treating or preventing CC hypertide in a cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a CC scond cell culture or mammal is also compared with that of a CC polypeptide in a cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a ceromatic compared compared with that of a ceromatic compared compared with that of a ceromatic compared compared with that of a ceromatic compared compared with that of a ceromatic compared compared with that of a ceromatic compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compare

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
           The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or decreases ABCG5 activity respectively. The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The approved that increases are compound that increases are compounded and the activity respectively.
                                                                                                                                                                                                                                                                                                           Novel mammalian ATP-binding cassette gene 5 polypeptide, a nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases
                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2002-416483/44.

polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present amino acid sequence represents the hamster ABCG5 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      98 AMSGRIGRAGTFIGEVYVNGRALRREQFQDCFSYVLQSDTLLSSLTVRETLHYTALLAIR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Culture or mammal which have ABCG5 polypeptide with a compound and characteristic where an increase or decrease in ABCG5 biological activity in the cell culture or in mammal, which have ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or contacted with the compound, identifies a compound that increases or comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The cell control contacted in a cell culture or mammal is also compared with that of a compound that increases or conjugate in a cell culture or mammal is also compared with that of a conjugate in a cell culture or mammal is also compared with that of a conjugate in a cell culture or mammal is also compared with that of a conjugate in a cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing conjugate. The method of the invention is useful for increasing cholesterol acid sequence represents the human ABCG5 mutant R243X protein of the invention.

                                                                                                                                                          immunostinulant; cardiant; thrombolytic; coagulant; vasotropic; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allorates.
                                                                                                  allergies, aplastic anaemia, burns, wounds, bone and cartilage nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                            which represent the human OREX open reading frames 1 to 3161. The OREX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with Ecor I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
